

Handling Missing Value

1. **Try to fill missing values from another files:** - There may be other files we can get that values, so, if possible, try to fill that values.
2. **Remove missing Values:** - If we have large amount of data then remove missing values. Like if 0.1% or 0.2% data is missing, we can remove that.
3. **Create model:** - To fill missing value we can create model to predict missing value and fill that value.
4. **Compute Value:** - We can fill value by mean, mode, median or constant value.
